

Oxygen Remote Explorer

Version 1.3.1 | February 2024

Release notes

The latest update to our remote and onsite collection solution is here, Oxygen Remote Explorer v.1.3.1! *Note that this product was previously known as Oxygen Corporate Explorer.*

Read below some of the key features included in this release. For a full list of updates, refer to the “What’s New” file in the Oxygen Remote Explorer “Options” menu.

Endpoint Data Collection

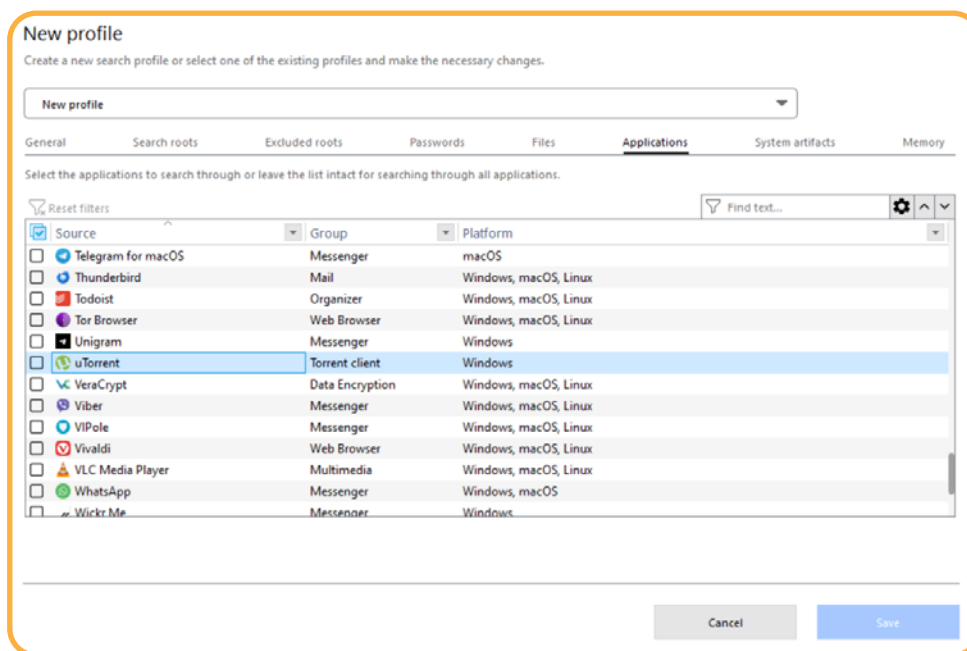

Deleted file recovery for Windows-based endpoints

We added the ability to choose deleted file recovery in the Profile Configuration window for Windows-based endpoints. Before extraction, users can choose if they want to recover deleted files from remote endpoints. Deleted file recovery is available from NTFS, FAT, and exFAT file systems.

Computer Artifacts

Extraction of μ Torrent data from Windows and search for torrent files

Oxygen Remote KeyScout now collects μ Torrent data from Windows computers. Evidence sets will include torrents, filters, history, and other artifacts. We also added the ability to search for files with .torrent extension on Windows, macOS, and Linux, and extract information about them.

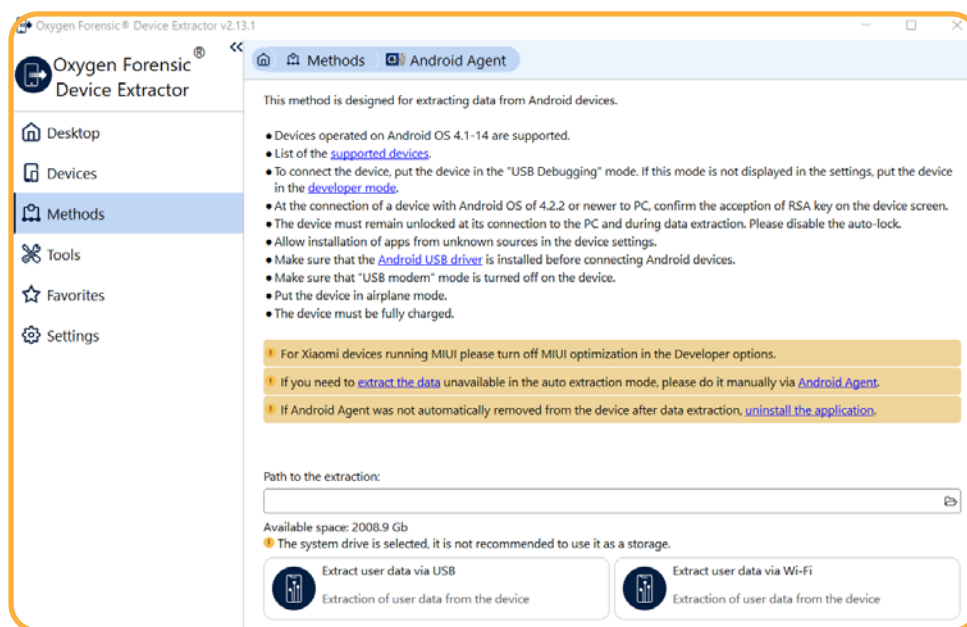

Other new artifacts

- Apple FaceTime data from macOS
- OpenOffice data from Windows and GNU/Linux
- Microsoft Outlook data from macOS
- FastStone Image Viewer data from Windows

Mobile Extraction Updates

Enhanced Android Agent method

You can now extract app data via Android Agent from devices running Android OS 14.0. Android Agent can be installed on a device via USB, WiFi, or OTG device. Once the acquisition process is finished, the Android Agent extraction can be imported into Oxygen Forensic® Detective for review and analysis.

Cloud Extractor Updates

Reddit cloud data extraction

Now you can extract evidence from Reddit cloud via login/password or token. Supported artifacts include the account information, chats, posts, subreddits, notifications, reactions, comments, subscriptions, and blocked users.

General

Updated Translation module

We updated our Translation module and added support for 5 new languages: Turkish, Farsi, Polish, Ukrainian, and Belarusian. The Translation module is available at no additional cost.
